

Bimplus Benutzerhandbuch

Welcome to Bimplus!

This manual introduces you to the options and approaches Bimplus - a service provided by ALLPLAN GmbH - offers to handle projects using the BIM method.

Detailed step-by-step instructions show you how to upload your planning data from Allplan or from other clients to Bimplus and to superimpose these data on other specialist models of the construction project. In addition, you will learn about the options other project participants have to view, check and change the data using the **Bimplus** web portal. Finally, you will find out how to spot planning errors and collisions and to assign tasks for solving these problems.
