

Einzelne Fachmodelle verschieben

If the superimposed specialist models are not positioned correctly after import, you can move individual models manually.

Important!

Regardless of the visibility settings in the **BUILDING STRUCTURE** area, Bimplus always moves the *whole model*!

To move a model

This is only possible if ...

The Bimplus project is loaded in BIM Explorer (see "[Loading the building model into BIM Explorer](#)")
The **Project navigation** palette is open (see "[Showing the Project navigation palette](#)")
You have the required rights (see "[Rights in Bimplus](#)")

1. Go to the **Project navigation** palette, **MODELS** area and click the name of the model that you want to move.

Bimplus encloses all objects of the selected model in a min-max box in full view, opening the **Details** palette on the right side.

2. Click **MOVE MODEL** in the **Details** palette.

3. *Select origin*

Click to select a point of the model in full view. A circle indicates the point clicked.

You can see the coordinates of this point in the **Details** palette.

Note: You cannot change this point later. If you want to select a different point, click **Cancel** and start again with step 2.

4. *Select destination or enter vector*

Point to the point to which you want to move the origin. You can see the coordinates of the this point in the **Details** palette.

5. Click to select this point.

Or:

Change the coordinates of the vector directly in the **Details** palette.

6. Click **MOVE**.

This moves the model.
