Navigating the building model freely

You can freely navigate the building model in BIM Explorer as you would in any common animation tool.

To freely navigate the building model

This is only possible if ...

The Bimplus project is loaded in BIM Explorer (see "[Loading the building model into BIM Explorer](#)")
You have a two-button mouse with a wheel or a three-button mouse

- Select and hold the left mouse button and move the mouse to turn the building model about the global origin.
Or:
- Move the wheel to zoom in on or out of the building model. As an alternative, you can also select and hold the middle mouse button and move the mouse to zoom in or out.
Or:
- Select and hold the right mouse button and move the mouse to the left or the right or toward you or away from you to move the building model to the left or the right or up or down.

Selecting a predefined view

You can select one of the predefined views on the toolbar at the bottom.

To select one of the predefined views of the building model

This is only possible if ...

The Bimplus project is loaded in BIM Explorer (see "[Loading the building model into BIM Explorer](#)")

- Go to the toolbar at the bottom and click  **Select view**. You can choose between **Front view**, **Top view**, **Side view**, and **Perspective view**.
