

Issues für erkannte Kollisionen anlegen

To include the clashes in issue management, you create a separate issue for each clash detected. Depending on the editing status, each clash issue goes from "open" to "solved" to "closed".

To create an issue for a clash

This is only possible if ...

The Bimplus project is loaded in BIM Explorer (see "[Loading the building model into BIM Explorer](#)")

The **Clash Manager** palette is open

You calculated clashes (see "[Detecting clashes](#)")

You have the required rights (see "[Rights in Bimplus](#)")

1. Show the **Clashes** table for the required structural level.

To do this, select the **Show table** check box in the  **Clashes** row.

2. Go to the **Clashes** table and click within any column of the clash for which you want to create an issue.

The **Clash properties** palette appears on the right side.

3. Click **NEW ISSUE**.

You can see the **Issue properties** palette instead of the **Clash properties** palette.

4. Complete the information about this clash issue (see "[Creating, retrieving, and editing issues on the BIMPLUS portal](#)").

5. Click **SAVE**.

Or:

Click **PUBLISH**.

This creates the issue. When you have immediately published the issue, the **Responsible** person and the people behind **CC email** addresses get emails informing them of the new clash issue; the clash no longer appears in the **Clashes** table.

6. Show the **Issues** table.

To do this, click **Show table** in the  **Open clash issues** row of the structural level.

The **Issues** table contains the new clash issue. When you look at the **Status** column, you can see that this clash issue is **Open**.
